# INTRODUCTION

My quarrel with all of these religions is that, the initial founders know the truth about the energies within this human body but, they decided to establish an entire religion built on false teachings in order to hold onto power and divulge their knowledge to a small group of people. They led people to a false life and now many of us are trapped in the cycle of life and death. They tell you that the divine creator is the almighty God with all the power and we should pray to him. I don't deny the cosmic energy of the creator but you have the same powers too. You only have to master your energies within you to be liberated. If our beloved religions showed us the way towards enlightenment as they ought to, civilisation would have reached impossibly high levels of enlightenment as we have been at a point in history.

Few humans desire for dominance has made the mankind as we are now deranged, unhappy, greedy, lust, depressed, materialistic, and no connection with the self and the cosmos. We have been totally detached from our mind and soul.

Do you know how they led you into slavery? They just made us believe that we are an inferior being and cut off your ways to attain a consciousness mind. The mind of a slave thinks that "I'm a slave", "This is my life" and "I am oppressed". So your mind believes you and brings what you believe as reality. Our subconscious and unconscious mind is very powerful what you believe or imagine because the reality, for you are the alchemist. Isn't it funny what we can do with an awakened mind and here we are fighting for hunger, freedom, safety and some of us to make ends meet but the truth is all these things are specifically crafted things to make you busy so that you wouldn't be connected to your energies and powers.

Hinduism is not a religion it's a path to self enlightenment. Just to be clear I'm not talking about these group of people who claim to be a Hindu just because they pray, go to temples and perform rituals. NO. I don't blame them they have been deviated from the original path. In Vedas suicide is considered one of the biggest sins a man can commit to his soul, suicide as in a person who lives a life without self enlightenment and dies without reaching their higher mind. Majority of people who live in India have been led astray from the Vedic way of life.

The criticism of various religions lies in the belief that the original founders possessed knowledge about the energies within the human body but chose to distort this truth in order to maintain power and control over the masses. Instead of guiding individuals towards self-enlightenment, these religions propagate false teachings about a supreme deity to be worshipped. However, it is argued that each individual has the potential to tap into their own cosmic energy and unlock their inner powers for liberation.

The current state of mankind is described as deranged, unhappy, and disconnected from both the self and the cosmos. This detachment is believed to have been orchestrated by convincing individuals of their inferiority and limiting their access to a conscious mind. By instilling beliefs of oppression and slavery within the psyche, people are constrained by their own perceptions and unable to realize their true potential as alchemists of reality.

The concept of Hinduism is presented not as a religion, but as a path towards self-enlightenment. It is emphasized that true adherence to this path involves more than mere external rituals and practices, but a deep understanding of the self and connection with the higher mind. The deviation of many individuals from the original Vedic teachings is seen as a major setback in the journey towards self-realization.

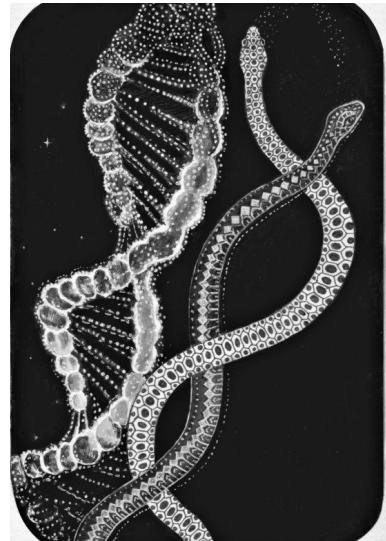

It is the distractions and struggles of daily life, such as hunger, freedom, and material pursuits, serve as tools to keep individuals preoccupied and disconnected from their inner energies and potential. The call for awakening the mind and recognizing one's own power to shape reality is a central theme in the critique of organized religions and societal norms that hinder personal growth and self-discovery.

True adherence to this path involves more than just going through the motions of external rituals and practices; it requires a profound inner journey towards self-awareness and a strong connection with the higher consciousness. The departure of many individuals from the authentic teachings of the Vedas is considered a significant obstacle in the quest for self-discovery. It is pointed out that the everyday challenges and temptations, such as basic needs, desire for independence, and pursuit of material wealth, act as obstacles that keep people entangled in trivial matters and disconnected from their inner essence and potential. The urgent need to awaken the mind and acknowledge one's own ability to shape one's reality stands out as a central message in criticizing established religions and societal norms that restrict personal development and hinder the process of self-realization.

# DNA

Only 2% of DNA has relevant biological function then one might wonder what the rest of 98% does ?

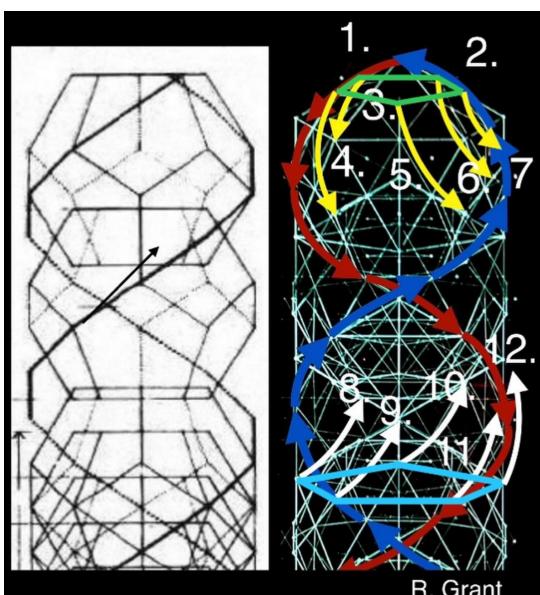

A research led by Dr.Gariaev have proven the psychic and linguistic capabilities of DNA this disproves the theory of our 98% of junk DNA, there maybe additional 10 DNA strands instead of double helix. A total of 10 DNA strands are mutating and awakening. Wave genetics is a technology and system developed in Russia by Peter gariaev that body can rejuvenate itself and in doing so can recover lost and damaged functionality i.e the body heals itself.

- Our DNA operates at a quantum level as waves and fields and prof Gruvich says that hypothesis is correct and concluded that there is no junk DNA. Our DNA is linked to our blueprint information that is held on quantum level photos are enlightened with that information on the quantum level at the time the photo was taken. Special laser equipment can capture your enlightened historical DNA quantum information from your photo this is converted into a bespoke personal sound matrix unique to you. Through listening to your historical sound matrix the healthier information rejuvenates your body.

## DNA may be the universal language of Spirituality

- Our DNA as in you are connected to the source. You are spirit living in a soul body, you can experience and control all the 5 (panchabhutas - water, earth, fire, air and ether)

• By opening our heart and mind all the answers to the great mysteries will be found within self.

Activating the full 12 DNA strands will create a connection between our human genetic coding and give us access to all knowledge, wisdom and healing

• The 12 chakras act as energetic doorways into our body connecting us to the vital forces of existence

The 12 strands of DNA serve as links through the 12 chakras to the energy web outside of our body

It is through opening and activating these portals of energy that we can begin to truly know ourselves

# CREATION

Consciousness ( Prajnanam brahma ) is brahma as in universal consciousness or collective consciousness of the whole universe "oneness "

Consciousness is the first cause of creation .The world exists because consciousness is and the world is the body of consciousness .Hence the universe is both real and unreal

**Real:**Because of the reality of consciousness which is its own reality

**Unreal:**Because of the universe does not exist as a universe independent of consciousness - yogavaistha

Creation is an on- going process and not a sudden phenomenon it does not obviously support the Big Bang theory according to vedas

There are two types of spirits that exists:-

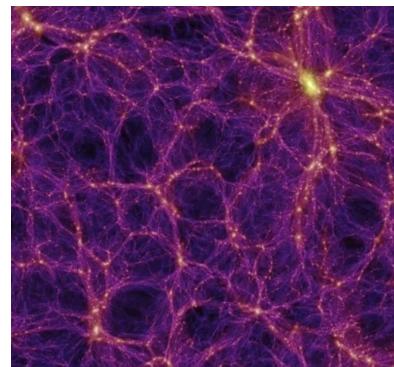

The perishable - all beings

The imperishable - The unchanging

Microcosm

(Spirit & atman)

Macrocosm

(Brahma)

Individual consciousness.

The higher spirit is another it is called supreme self, who entering the three worlds as the eternal lord,supports them. B.6.15.16-17

Atman (soul) alone exists as the reality prior to the creation of the phenomenal world.The soul(atman) projects the created objects through its mystical power of maya

" om atma va idameka evagna asinnanyatki nchana mishath saikshatas lokannu srija iti"

In the beginning all this verily was atman(absolute self) only, one and without a second.There was nothing else that winked he(atman) willed himself. "let me now create the world" . As desire came to humans for example "poets" who sought "wisdom" and therefore created a "bond" to this physical world.This is one of the essential teachings of Hinduism which is that the goal of all our lifetimes is to overcome desire for this physical world. Desire is what keeps us trapped in the cycle of reincarnation. When we give up the desire that creates a bond to this world which in Hinduism is a form of original sin then we can be released back to Brahman and eternal perfect existence.

Aranyaka rituals for the attainment of oneness with Suguna brahma (To attain collective consciousness) :

THE VIRAT (representing the totality of the physical bodies)

THE DETIEE OR DEVAS (who control various organs)

THE ELEMENTS (Either, fire, water, air, earth)

THE INDIVIDUAL BODIES

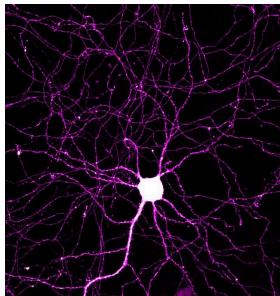

THE FOOD BY WHICH THESE BODIES ARE SUPPORTED

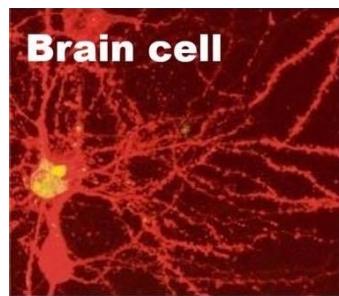

THE CREATOR (consciousness) ENTERS THE BODY AS THEIR LIVING SELF.  
HENCE CONSCIOUSNESS ATTAINED.

# CONSCIOUSNESS

Classical  
physics

Macrocosm

Quantum  
physics

Microcosm

Between the classical and the quantum world lies metaphysics the domain of philosophers and religious adepts for centuries. This domain has shrunk as science has investigated new fields. Some scientists believe that all of metaphysics would eventually submit to scientific logic.

Scientific theories leave no room for free will the how can we have the capacity to make choices when every thing is set in stone. How can awareness or consciousness emerge out of inert matter? If free will not merrily an by product ,then how does the circle of cause and effect get broken by consciousness?

If the brain machine is conscious why can't silicon machines be likewise conscious? These and other questions in neurophysiology, physics and computer science have brought the issue of the nature of the observer centre- stage in the discussions of modern science. Even if modern science develop a theory of consciousness will it only rearrange the relative placement of three circles or will it require a fundamental revolution in science? The question of the relative placement of the three circles is important one because there is a significant difference between classical logic and quantum logic.

According to classical logic we can only speak in terms of presence or absence of attributes this is a familiar common classical logic of the material world. On the other hand quantum logic is non-binary according to it we can speak in terms of a superposition of attributes

Thus a photon can be simultaneously polarised in two different directions or an electron can be simultaneously present in variety of places. This is what Richard Feynman one of the great quantum physicists of our time had to say about the foundation of his subject.

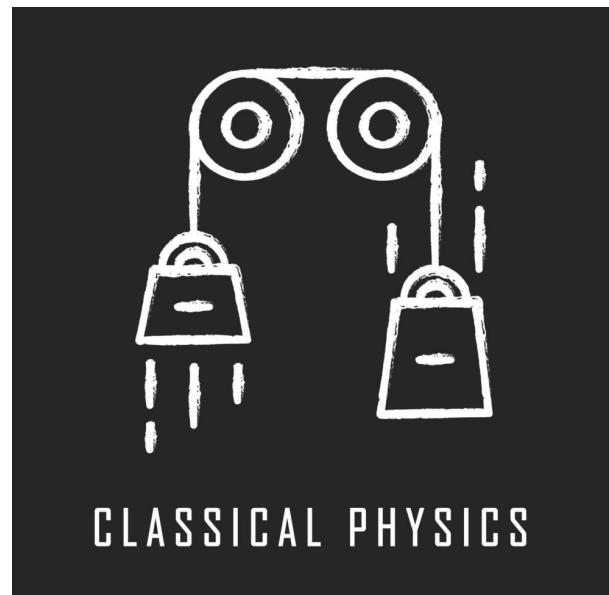

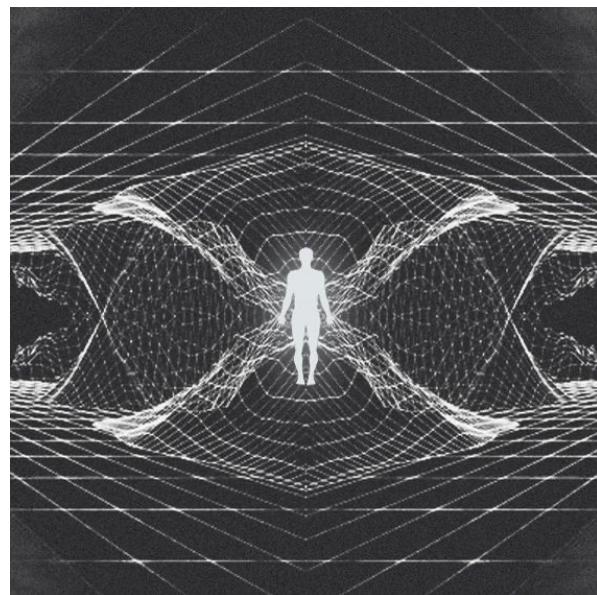

“There was a time newspapers said only 12 men understood the theory of relativity. I do not believe there ever was such a time. There might have been a time only one man did, because he was the only guy who caught on, before he wrote his paper. But after people read the paper, a lot of people understood the theory of relativity in some way or other, certainly more than 12. On the other hand, I can safely say that nobody understands quantum mechanics.” — Richard Feynman

The trouble in understanding quantum mechanics emerges when translations in view of old style rationale are utilised. So assuming we should forsake dated either/or rationale and the resultant or going with realism in imagining the physical world, for what reason do we demand involving such an understanding in looking at peculiarities of the brain?

There are three main views on the nature of metaphysics :

Metaphysics = classical logic

Human behaviour will turn out to be completely describable by classical logic. Whereas consciousness will be seen as an emergent phenomenon somehow related to the complexity of the human brain. This orthodox view of reductionist science, but research in “wave genetics” mitigates against this view.

Metaphysics = quantum / classical logic

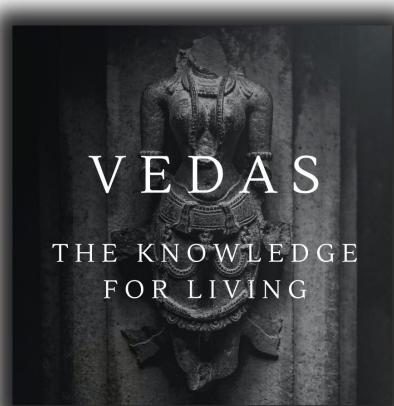

The neural activity in the brain held together by a quantum field that endows consciousness with a unity. This makes the brain a hybrid quantum/ classical machine. It also suggests that computers will never have consciousness since they do not work on quantum logic. “The heart of metaphysics is quantum logic” is the view that has been espoused by many prominent contemporary scientists.

Metaphysics cannot be reduced to classical physics. Current physics cannot explain consciousness. Because even if it could then consciousness will be reduced to a "mechanical" response and we would all be mere robots.

Reality is fundamentally paradoxical.

Consciousness maybe a recent concern of modern , but it is described as the ultimate reality and mastery in ancient texts and its study is considered as the greatest science. Books such as Tripura rahasya, yoga Vasishta, Upanishads and vedas claim to describe the nature of consciousness. It is fascinating how it took modern science this long to identify these fields of study. Whereas, the ancient texts of India have already mastered these subjects.

An interpretation of our mind is that it works on the quantum logic but can also be explained in classical logic . This would explain why it was possible for the Vedic sages to have intuitively grasped the quantum aspects of reality yet could only speak about it in hints, suggestions and paradoxes, for ordinary language is inadequate for this purpose.

According to vedas, awareness is the reaction that brain provides to an underlying knowledge or awareness principle that is self. This tells us that the tools of awareness such as vision, touch, hearing and most important the mind. Our consciousness has infinite potential.

By awakening our sleeping consciousness we can see through maya and break the shackles of the matrix and lastly the true liberation that is breaking free from the physical world. This is truth presented to us in vedas.

We need to question the very reality we live in as it is clouded and influences us to lead a life of illusion.

**BREAK FREE FROM MAYA AND UNITE YOURSELF WITH YOUR INNER GOD**

Schrödinger used Vedic ideas in his highly influential book *What is Life?* Written in 1945 it played a significant role in the development of

modern biology. As stated by his biographer Walter Moore there is a clear influence of vedas in Schrödinger's research.

"The unity and continuity of Vedanta are reflected in the unity and continuity of wave mechanics. In the world view of physics was a model of great machine composed of separate interacting material particles. During the next few years, Schrödinger and Heisenberg and their followers created a universe based on superimposed inseparable waves of probability amplitudes. This new view would be entirely consistent with the vedantic concept of all in one." — Richard Moore

Consciousness is definitely not an unexpected consequence. It is popularly known that Schrödinger's development of quantum mechanics was inspired by vedanta. His debt to the Vedic views have been expressed in an essay he wrote in 1925 prior to his quantum theory:

"This life of yours which you are living is not merely a piece of this entire existence, but is in a certain sense the "whole" : only this whole is not so constituted that it can be set eyed in one glance. This as we know, is what the Brahmins expressed in that sacred, mystic formula which is yet really so simple and so clear : tat tvam asi, that is you, or, again, in such words as " I am in the east and the west. I am above and below, I am this entire world." — Schrödinger

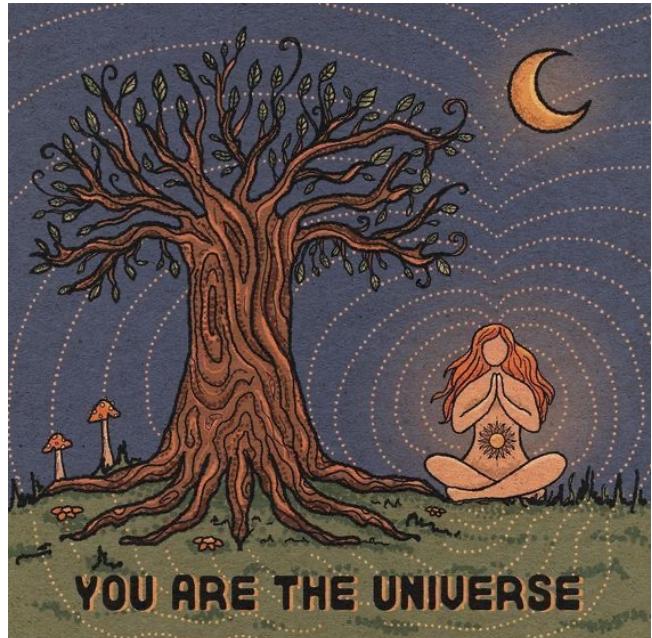

Reality is merely an illusion, albeit a very persistent one — Albert Einstein

Current theories about the universe as an hologram or stimulation or matrix in which we are believed to be embedded in stimulated experimental environments are hypothetical to date. To comprehend the idea of reality as a deception goes past logical rules that goes beyond scientific principles that govern physics and mathematics.

Ancient Vedanta refer to maya as illusion of the physical realm, there are many realms beyond physical realm a person who has awakened their conception can see and feel past the physical realm. Our attachment to this physical realm will keep us trapped in this maya and endless reincarnations this was our soul is never liberated. The whole universe is inside you but to experience it you just have to liberate yourself and go beyond your physical body can see. The physical body is just like a clothing to our soul.

"The lord is the seer and the external energy, which is seen, works as both cause and effect in the cosmic manifestation made possible" — Srimad Bhagavathi 3.5.25

Maya in Sanskrit can be both illusion and energy, the ultimate source of all energy is the absolute truth. Maya means "that which is not" ma = "not" and ya = "there is", maya conceals the fact that everything is emerging from the absolute truth and makes the temporary manifestation of material world look attractive and real. Attraction to maya keeps the self in a perpetual cycle of birth and death, in an endless attempts to fulfill desire for temporary things.

# POWERS OF MAN

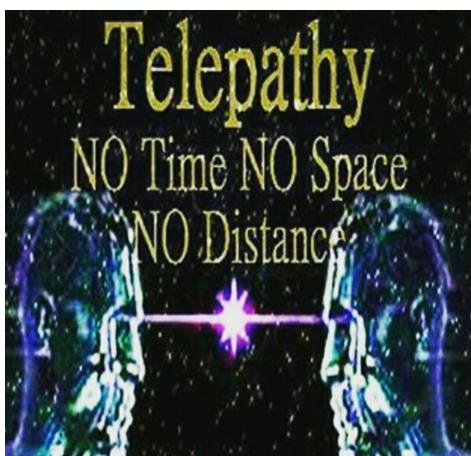

All these truths are embraced by our ancient civilisations and some knowledge of the truth survived because not all people have followed this path of enlightened and eventually the truth is buried under the matrix of our making. This shows how far away we are deviated from the truth, people of ancient civilisation all over the world proved to be enlightened beings they were so advanced that we could not even fathom. To put in layman terms they could achieve anything the mind could imagine with the power that is residing inside everyone.

These powers, connected to the energies that reside within all living beings, have the potential to reshape the very fabric of our existence. By tapping into these energies, one can transcend the limitations of the physical world and wield control over the elements of nature itself.

Throughout history, there have been extraordinary individuals who demonstrated remarkable abilities such as flying, teleportation, telepathy, and manipulation of reality. These powers were not exclusive to these few exceptional figures, but are accessible to anyone who harnesses the inner energies that lie within. The potential to achieve such feats is within reach for every individual, waiting to be awakened and utilized to its fullest extent.

By awakening the inner energies and mastering the powers within, one can become a true master of the matrix in which we exist. The ability to control the elements, influence the energy that surrounds us, and manifest our desires into reality is within our grasp. The ancient sages understood the vast potential that lay dormant within each person, and it is through their teachings that we can begin to unlock the limitless powers that reside within us.

In essence, the powers of a man are not just confined to the physical realm, but extend into the metaphysical and spiritual dimensions as well. By tapping into the soul energy that sets us apart from other living beings, we can transcend the limitations of our human existence and access a realm of infinite possibilities. The key lies in recognizing and harnessing the energies that reside within, unlocking a world of boundless potential and endless possibilities.

Humans have always been fascinated by the idea of having extraordinary abilities beyond the scope of normal human capabilities. While these abilities are often associated with science fiction or myths, there are some who believe that it is entirely possible for humans to possess such powers.

One such ability is telepathy, the supposed communication between minds without the use of traditional senses. Some claim that individuals can tap into this ability by honing their mental focus and tuning into the thoughts of others. While the existence of

telepathy is still debated among scientists, some argue that there may be potential for humans to develop this skill through spiritual training and practice.

Teleportation is another intriguing ability that many believe humans could potentially possess. The idea of being able to transport oneself from one location to another instantly is a popular concept in science fiction, but some theorize that it could be within the realm of possibility for humans through unknown scientific principles or advanced technology.

Clairvoyance, the ability to perceive events or information that is hidden from normal senses, is another skill that some argue could be within the reach of humans. Those who claim to have clairvoyant abilities often report experiencing visions or insights that seem to come from beyond the physical realm.

Levitation, the act of defying gravity and floating above the ground, is another ability that some believe humans could potentially develop. While there have been reports of individuals displaying levitation-like feats through physical or psychological means, the true nature of this ability remains a mystery.

The notion of being able to see into the past, present, and future is a common theme in many mystical and spiritual traditions. While this ability has not been scientifically proven, some believe that humans may have the potential to tap into a higher consciousness that transcends time and space.

Lastly, the idea of being able to manifest anything at will is a concept often associated with the law of attraction and other metaphysical beliefs. Some claim that by harnessing the power of positive thinking and intention, humans can bring their desires into reality.

While these abilities may seem far-fetched or impossible to some, there are those who believe that with the right mindset, training, and understanding of the universe's mysteries, humans may one day unlock these extraordinary powers. Whether these abilities are truly within our reach remains to be seen, but the exploration of these topics continues to captivate the human imagination.

# QUABBALAH

Quabbalah is a secret doctrine of Israel it's esoteric teachings are intended to explain the nature of the universe and the human beings, the purpose and nature of existence, and various other branches of metaphysics. The doctrine bestow methods to aid understanding of the true capabilities of human and therefore attaining self realisation.

This quote from transcendental magic gives us an overview of all things presented in the Kabbalah and the importance of that doctrine, he suggests that Kabbalah was one of the key source of knowledge adopted by the Freemasons and thereby help aid their occult practices. Pike mentioned that, "One is filled with admiration, on penetrating into the sanctuary of the Kabbalah, at seeing a doctrine so logical, so simple, and at the same time so absolute. The consecration of the most fundamental realities by the primitive characters; the trinity of words, letters and numbers; a philosophy simple as the alphabet, profound and infinite as word; theorems more complete and luminous than those of Pythagoras; a theology summed up by counting on one's fingers; an infinite which can be held in the hollow of an infant's hand; ten ciphers and twenty two letters, a triangle, a square, and a circle,—these are all the elements of Kabbalah. These are all the elements of the Kabbalah. These are the elementary principles of the written word, reflection of that spoken word, reflection of that spoken word that created the world! —Albert pike

The Kabbalah is called the soul of the soul of the law was pretty cunningly and conveniently hidden and those secret documents were only revealed to few highest initiates. Moses concealed the secret instructions that god has given him in the first four books of the Pentateuch, just as **the spiritual energies of man is concealed in his physical body.**

The old quabbalist rav shimon bar yochai wrote in the zahar that it was Moses, not god, who separated the Red Ocean, permitting these Israelis to get away from the pharaoh and Egyptian armed force barely. Moses consolidated the force of convictions with an exceptionally strong otherworldly innovation. He had posted an equation that in a real sense gave him admittance to all the subatomic domain of nature.

This formula is called 72 names of god. Not like Peter, Lisa and Adam, but rather 72 sequences consisting Hebrew letters that have the extraordinary power to overcome the law of nature in all forms, including the human nature.

### For HEALING : MEM HEY SHIN

The Qabbalist divided the purpose and practical uses of their sacred science into 5 divisions each of these sections deals with all the esoteric knowledge of the cosmos:

#### 1. The Natural Kabbalah

- To assist the adept in his study of nature's masteries.

#### 2. The Analogical Kabbalah

- To display the relationship which exists between all things in nature and revealed that all creatures and substances were one in essence and that the little universe was a replica in miniature of god and the great universe.

#### 3. The Contemplative Kabbalah

- To aid the abstract reasoning faculties cognised the measureless planes of infinity and learned to know the creatures existing within them.

#### 4. The Astrological Kabbalah

- To those who studied its lore in the power, magnitude, and actual substances of the sidereal bodies, and also revealed the mystical constitution of the planet itself.

#### 5. The Magical Kabbalah

- to take control of the invisible world's demons and subhuman intelligences.
- It was likewise exceptionally esteemed as a technique for mending the debilitated by charms, amulets , talismans, and summons.

The secrets Moses used to overcome the laws of nature has been concealed in Zohar for 2000 years. This esoteric doctrine of Kabbalah are in alignment with the secret teachings of all schools of Philosophy, but the way by which those secrets are hidden and only revealed to some and masked to all the rest of the followers is most peculiar.

It becomes clear as we go through all the documents of the kings, sages, prophets, and saviours whom bible students has revered for ages are once existed personalities are in reality only the true attributes of man himself. This means all those great attributes that are possible to many people in the history like flying, teleportation, telepathy, alternating the very reality

around them, alchemy, parting of Red Sea, walking on water, living up to 150 plus years which were possible to old Indian sages, then those are very much possible to you as well.

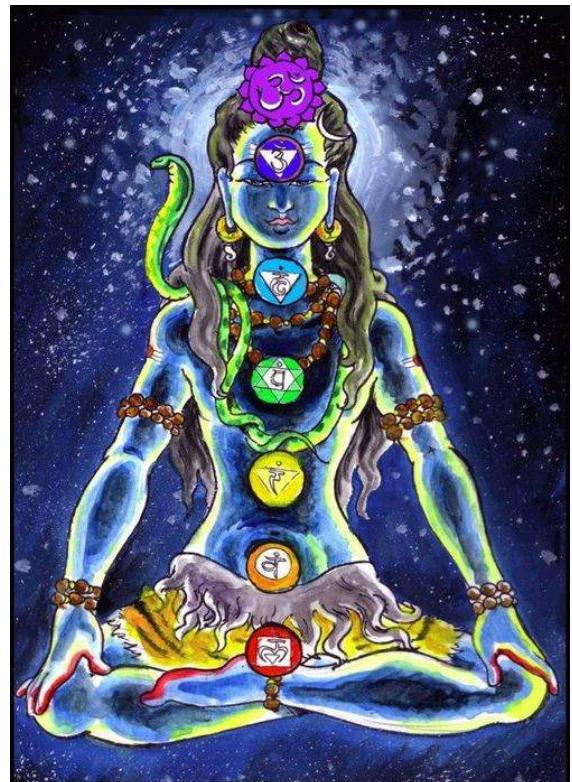

In Hinduism, they say when you have finally attained vimukti or liberation then you will attain oneness and connection with everything.

# CHAKRAS

All humans should awaken their chakras, these will make changes in the way we look at the whole universe you'll become all knowing self. we will have connection to the nature, our mind and consciousness will be altered with the awakening of chakra and has a significant difference in our daily life. Our emotions are a reflection of the state of mind, love and hatred in a relationship and even the agonies we see in life is not a mere circumstance of life you face what your mind projects. Hence mastery of mind which is therein the is must to change the reality of life.

All these unhappiness, depression, anger, are a byproduct of detaching from the our chakras. A person cannot feel the people, animals and nature around them so they could so easily kill a being and feel nothing, a person who is in alignment with their chakra will have a peaceful, empathetic and will be in connection with all beings. Their morals, their relationships will be in a peaceful state their mind works in an higher level of knowing( not thinking).

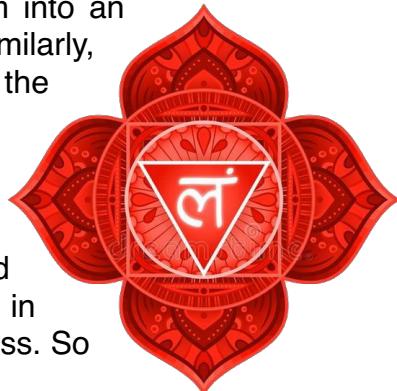

Do we need a far more solid reason than happiness, peace, strength both physical and mental and most importantly liberation of the soul from the cycle of birth and death.

## Mooladhara Chakra

In Sanskrit the word mooladhara means “root of existence”, Mula means root and adhara is base or support this chakra is exactly the foundation chakra. The root of our existence is influenced by the mooladhara or root chakra. Just as a lotus roots are latched into the mud as it blooms it reaches the surface clean, to bloom into an enlightened flower it's roots are important to ascend. Similarly, mooladhara helps the spiritual ascend to sahasrara which is the highest consciousness.

In Tantra mooladhara is considered as the abode where the kundalini Shakti resides coiled and in great slumber at the base of the spine. This great Shakti is sleeping when aroused it made it ascend up to the sahsrara through sushmana nadi in the spinal cord where you experience the higher consciousness. So awakening the muladhara or root chakra in tantric yoga.

ELEMENT : Earth

**SYMOLOGY:**

The Mooladhara chakra is often represented by a lotus flower with four deep crimson petals. Each petal bears the letters vam, sham, sham, and sam, inscribed in gold.

**LOCATION OF MOOLADHARA CHAKRA:**

MALE: Between scrotum and Anus

FEMALE: Posterior side of the cervix

In mooladhara chakra there is a knot called Brahma Granthi it means knot of brahma. Only when a person begins to open his consciousness then the knot open the power of mooladhara. As long as the knot is intact the powers are locked within and once it opens then a person's consciousness get liberated and will understand a greater purpose of living than the animal state of mind.

Mooladhara is the base from which three primary clairvoyant channels or nadis arise and stream up the spinal rope. It is said that ida, the psychological power, rises up out of the left of mooladhara; pingala, the crucial power, from the right; and sushumna, the profound power, from the middle. As per tantra, this radiation point is exceptionally unstable. Awakening of the dormant kundalini is sparked here when the positive and negative forces of ida and pingala are completely balanced.

When the muladara chakra is awakened you'll find lot of supernatural things unfolding within you and outside the physical body. Firstly the adept will experience levitation of the soul body. They'll feel the commotion that they are floating in the space, leaving behind the physical body. Other than astral levitation, the adept at times encounters mystic peculiarities like perceptiveness or clairaudience. Other familiar signs remember developments or emerging warmth for the region of the coccyx, or a crawling sensation, similar to something moving gradually up the spinal line. These sensations are a byproduct from the rising of shakti or the awakened kundalini.

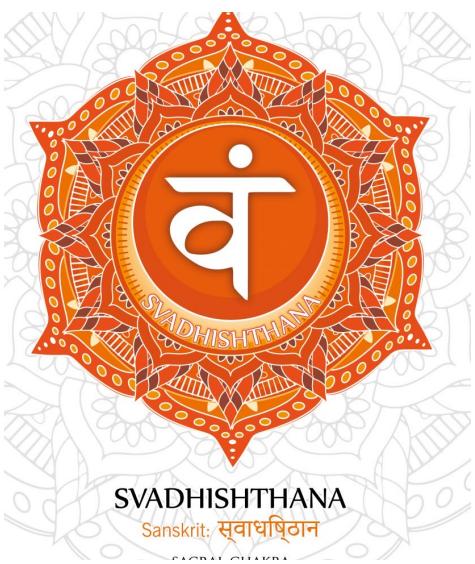

## SVADHISHTHANA CHAKRA

The Sanskrit terms adhisthana, which means "dwelling place or residence," and swa, which means "one's own." Thus the meaning of swadhisthana is 'one's own abode'. Despite mooladhara's significant position in the chakra system, swadhisthana, which is positioned extremely close to mooladhara, is also involved in and accountable for mooladhara's kundalini shakti awakening.

ELEMENT : Water

**SYMOLOGY:**

Commonly it is depicted as a six petalled vermillion or orange-red lotus. On each petal there is a letter: bam, bham, mam, yam, ram, and lam, written in the color of lightning.

The element of this chakra is water, symbolized by a white crescent moon within the pericarp of the lotus. The crescent moon is formed by two circles which engender two further yantras. The larger has outward turned petals and represents the conscious dimension of existence.

#### LOCATION OF SVADHISTHANA CHAKRA:

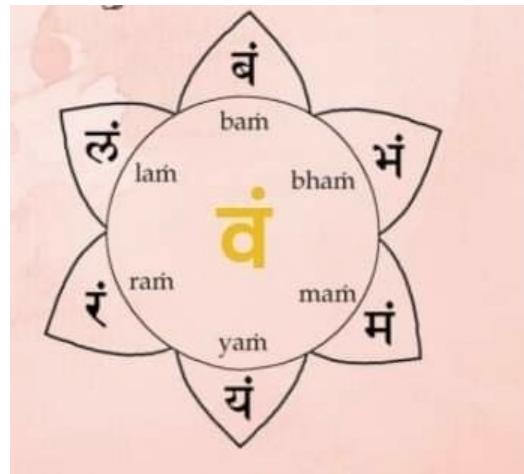

**MALE AND FEMALE :** At the level of public bone it is a small blub above the anus. It is at the bottom of the spinal column, at the same degree as the coccyx or tailbone.

It is believed that Swadhisthana is the foundation or substratum of each individual human existence. This chakra's correlative is the unconscious part of the mind.

The unconscious mind, with its repository of mental sensations known as samskaras, is its analogue in the brain. It is stated that the swadhisthana chakra might represent all of the karmas, past lives, past experiences, and the larger unconscious aspect of the human psyche. The unconscious mind is the source of individual existence, and the various primal urges experienced at this chakra level emerge from the unconscious.

This is the cosmic womb, hiranyagarbha, where all things are existing in their potential form. According to the Rig Veda, "In the beginning of creation there was hiranyagarbha, then came all the living beings, all the beings that exist, and He was the protector of all."

The final remnants of karma are released and all bad samskaras manifest and are banished when kundalini is in the swadhisthana chakra. You can be experiencing feelings of anger, fear, or intense sexual fantasies right now. Lethargy, indolence, depression, and various tamasic symptoms are other possible symptoms. You have a strong inclination to put things off and want to sleep all the time. Purgatory is the name given to this period of maturation, and if you study the lives of many of the great saints, you will discover that the majority of them experienced intense suffering and temptation during this time.

The only people who can resist temptation are those who possess great willpower and courage. This strange experience that is akin to the last explosion of the life-seed has been experienced by all great men and saints. The swadhisthana chakra is home to the cycle of birth and rebirth.

Only when the adept understands the fact that desire for world things will never be gratified in a single lifetime, let alone hundreds of them. The person should get detached from the material world then and only then he can pass swadhisthana and reach manipura.

# MANIPURA CHAKRA

Manipura is derived from two Sanskrit words: mani meaning 'jewel' and pura meaning "city". Therefore, manipura literally means "city of jewels". In the Tibetan tradition, this chakra is known as mani padma, which means "jewelled lotus". Manipura is a very important center as far as the awakening of kundalini shakti is concerned. It is the center of dynamism, energy, will and achievement and it is often compared to the dazzling heat and power of the sun, without which life on earth would not exist.

In the same way that the sun continually radiates energy to the planets, manipura chakra radiates and distributes pranic energy throughout the entire human framework, regulating and energizing the activity of the various organs, systems and processes of life. When deficient, it is more like the glowing embers of a dying fire rather than a powerful intense blaze. In this state the individual is rendered lifeless, vitality deficient and devoid of energy. He will be hindered by poor health, depression and lack of motivation and commitment in life. Therefore, the awakening of manipura is an important precedent, not only for the sadhaka, but for anyone who wishes to enjoy life more fully.

ELEMENT : Fire

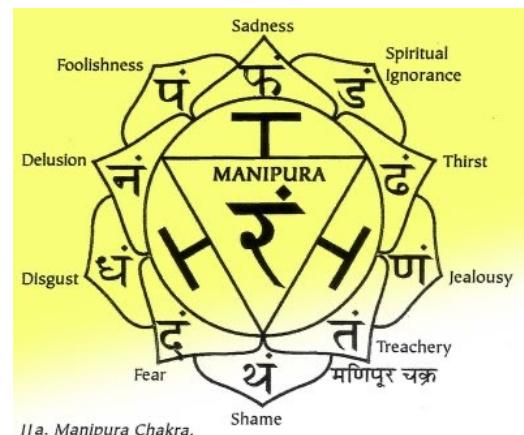

SYMOLOGY : Manipura is symbolized by a ten petalled bright yellow lotus. Some of the tantric texts say the lotus petals are the color of heavily-laden rain clouds. On each petal one of the ten letters: dam, dham, nam, tam, tham, dam, dham, nam, pam and pham is inscribed in the color of the blue lotus. In the center of the lotus is the region of fire, symbolized by an inverted fiery red triangle which shines like the rising sun.

LOCATION OF MANIPURA CHAKRA :

MALE AND FEMALE : Behind the navel on the inner wall of the spinal column.

It is stated that understanding the complete bodily system comes from meditating on the manipura chakra. The body becomes radiant and free of sickness when this center is awakened and purified, and the yogi's mind does not revert to lower states.

Many tantric scriptures and the Buddhist tradition also hold that manipura, not mooladhara, is where kundalini actually awakens. Furthermore, in many tantric traditions, there is no mention of mooladhara or swadhisthana since it is thought that these two centers are part of the upper animal worlds, whereas higher man prevails from Manipura onward. Thus, the dwelling of Swadhisthana is

IIa. Manipura Chakra.

Mooladhara, the seat of Kundalini, and the awakening occurs in Manipura. This is due to the fact that once reaching Manipura, awareness begins to continuously awaken, and there is almost no risk of a decline in consciousness. Kundalini may repeatedly emerge and then retreat up to this stage, but the waking of Manipura is what we refer to as a confirmed Awakening.

The adept will see the utmost happiness, sublime vistas, flawless concepts, and expanded potential of human awareness. Then, of course, this superior perspective will inform all he thinks and does. For this reason, while the psychic abilities that materialize in mooladhara and swadhisthana are still influenced by the negative side of the lower mind, the psychic abilities that come to the sadhaka after they have awakened and established the kundalini in Manipura are actually kind and compassionate. The manipura chakra may be awakened to provide one the following abilities: self-defense, the capacity to create and destroy, awareness of one's own body, immunity to sickness, firephobia, and the capacity to withdraw energy to sahasrara.

## ANAHATA CHAKRA

The word anahata from Sanskrit means “unhurt or unstruck or unbeaten” And the reason this area is so named is because of its connection to the heart, which beats, throbs, or vibrates in an uninterrupted, continuous rhythm. Many scriptures claim that there is a transcendental sound that is non-physical, non-empirical, and unending in the same manner that the heart beats faithfully and continually from the moment of conception to the moment of death. In kundalini yoga this chakra is of at most important because the Shakti automatically ascends from manipura to anahata it has to stay there for a long period of time.

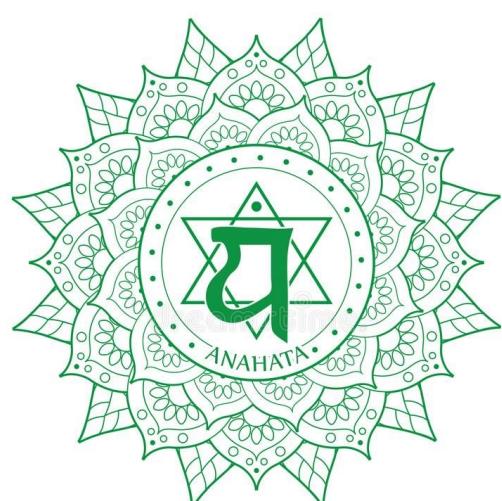

The term hriday-akasha, which translates to "the space within the heart where purity resides," is another name for the heart center in yoga. This chakra has an extremely sensitive center since it is directly linked to the area of the brain that controls all creative sciences and fine arts, including poetry, dance, music, and painting.

ELEMENT : Air

SYMOLOGY: Its twelve petals each bear the following letters written in red: kam, kham, gam, gham, anga, cham, chham, jam, jham, nyam, tam, and tham.

LOCATION : Behind the chest's center at the spinal column's inner wall.

Anahata is a member of the first eternal planes, maha loka. Its tanmatra, or sense of touch, is prana, which travels through the mouth and nose as its vayu. The hands are known as the karmendriya and the skin as the gyanendriya. Manomaya kosha, which governs the intellect and emotions, is symbolized by the anhata chakra. This heart center is home to the second psychic knot, Vishnu granthi. It stands for

the shackles of emotional connection and the propensity to make decisions in life based more on the intensity of one's emotions and sentiments than on the guidance of a spiritual search. When the feelings support and balance the spiritual awakening instead of acting as an obstacle, Vishnu granthi becomes unbound.

It is stated that the most renowned yogi and most loved by ladies is the one who meditates on the heart lotus. He is exceptionally intelligent and full of good actions. He has total control over his senses, and he is capable of focused, focused thought. He can inhabit another person's body at will, and his speech is inspired.

Awakening the anahata chakra requires having strong, positive associations and unwavering faith in one's own willpower. It is essential to change your way of thinking and develop caution if your thoughts often manifest into reality. Prior to the awakening, one may experience physical symptoms such as chest pain or a fast heartbeat, but will feel healthy and active overall.

Emotional balance, heightened senses, and psychic abilities may manifest, along with the ability to heal others. Non-attachment to worldly things, optimism, and a sense of inner peace accompany the awakening of the anahata chakra, leading to a deeper understanding of life beyond duality. Awakening the anahata chakra requires having strong, positive associations and unwavering faith in one's own willpower. It is essential to change your way of thinking and develop caution if your thoughts often manifest into reality.

Prior to the awakening, one may experience physical symptoms such as chest pain or a fast heartbeat, but will feel healthy and active overall. Emotional balance, heightened senses, and psychic abilities may manifest, along with the ability to heal others. Non-attachment to worldly things, optimism, and a sense of inner peace accompany the awakening of the anahata chakra, leading to a deeper understanding of life beyond duality.

Awakening the anahata chakra is a deeply spiritual experience that goes beyond the physical realm. It involves tapping into the energy center located in the heart region and harnessing its power for personal growth and transformation. Having strong, positive associations means surrounding oneself with supportive and uplifting people who encourage spiritual development. Unwavering faith in one's own willpower implies having a firm belief in one's ability to overcome obstacles and manifest positive changes in one's life through determination and perseverance.

Changing one's way of thinking is a crucial aspect of chakra awakening, as it involves shifting from a mindset of limitation and fear to one of abundance and possibility. Developing caution with one's thoughts means being mindful of the power of the mind to create reality, and being vigilant in cultivating positive thoughts and intentions. The physical symptoms experienced prior to the awakening, such as chest pain or a fast heartbeat, are often signs of the chakra opening and releasing blocked energy, leading to a sense of vitality and well-being.

Emotional balance, heightened senses, and psychic abilities that may manifest during the awakening of the anahata chakra are indications of a deeper connection to one's intuitive and spiritual self. The ability to heal others is a gift that accompanies the opening of this chakra, as it allows individuals to channel energy and promote healing in others through compassion and love. Non-attachment to worldly things, optimism, and a sense of inner peace are qualities that emerge as one transcends the limitations of ego and material desires, leading to a greater sense of harmony and contentment in life.

Overall, the awakening of the anahata chakra is a profound journey of self-discovery and spiritual growth, leading to a greater understanding of the interconnectedness of all beings and a deeper appreciation for the unity of life beyond the dualistic perceptions of the mind.

## VISHUDDHA CHAKRA

Vishuddhi chakra is a key element in the journey of spiritual awakening. It allows for a deeper understanding and acceptance of the dualities of life, leading to true discrimination and wisdom. By awakening this chakra, one can purify the mind and body, ensuring excellent health and longevity. The nectar of immortality is said to flow through vishuddhi, offering a sense of bliss and compassion. Through practices like khechari mudra, one can harness the potential of this chakra and experience a state of eternal youth and rejuvenation.

Additionally, vishuddhi is linked to receiving thought vibrations from others, allowing for a profound connection with the world around us. Awakening vishuddhi chakra can lead to powerful transformations, offering a path to freedom from fear and attachment. The nectar of immortality is said to flow through vishuddhi, offering a sense of bliss and compassion.

ELEMENT : Ether

SYMOLOGY : Although some tantric writings describe the vishuddhi chakra as a dark gray lotus, it appears that most people see it as a sixteen-petalled purple lotus.

LOCATION : cervical plexus directly behind the throat pit

Vishuddhi, also known as the throat chakra, is believed to be the gateway to higher consciousness and spiritual awakening. It is associated with clear communication, self-expression, and the ability to speak one's truth with integrity. By focusing on practices like khechari mudra, a yogic technique that involves rolling the tongue back to stimulate the chakra, one can harness the potential of vishuddhi and experience a state of eternal youth and rejuvenation.

Furthermore, vishuddhi is not only connected to physical rejuvenation but also to the synchronization of mental and emotional energies. It is linked to receiving thought vibrations from others, allowing for a profound connection with the world around us. This interconnectedness enables individuals to empathize with others and understand the

underlying emotions and intentions behind words and actions. Consequently, awakening the vishuddhi chakra can lead to powerful transformations in one's personal relationships and communication skills, offering a path to freedom from fear and attachment.

In essence, the activation of the vishuddhi chakra goes beyond physical benefits, reaching into the realm of spiritual growth and interconnectedness with the universe. It opens the door to enhanced intuition, deeper empathy, and a more profound sense of purpose and meaning in life. By delving into the depths of this chakra, individuals can unlock their true potential and experience a heightened sense of awareness and fulfillment in all aspects of their being.

## AJNA CHAKRAS

The eyebrow center holds a significant place in the realm of spiritual and physical well-being, as it is closely connected to the ajna chakra. This chakra, also known as the third eye chakra, is said to be the gateway to higher consciousness and spiritual awakening. By exerting constant pressure on the nerve running from the eyebrow center to the medulla oblongata, one can maintain conscious and unconscious awareness of the ajna chakra.

The ajna chakra is symbolized by a two-petaled lotus, with bija mantras inscribed on each petal. It is associated with the pineal gland, which acts as a lock on the pituitary gland. Through various yogic techniques, such as trataka and shambhavi mudra, one can regenerate or maintain the health of the pineal gland, thus unlocking the potential of the ajna chakra.

**ELEMENT :** light

### SYMOLOGY :

The traditional symbology of the ajna chakra includes a perfectly round circle representing shoonya (the void), an inverted triangle symbolizing shakti (creativity), and a black shivalingam, which denotes the astral body. The chakra is also associated with the cosmic sound of Om and the deity Paramshiva.

**LOCATION :** In brain directly behind the eyebrow.

Awakening the ajna chakra leads to heightened mental awareness and intuition. It allows one to perceive knowledge directly without relying on the senses and enables the

manifestation of astral projection. The center acts as the witnessing center where one becomes the detached observer of all events, both internal and external.

By developing the ajna chakra, attachment, ignorance, and lack of discrimination can be overcome. The purified intelligence or subtle perception that arises aids in converting mental resolves into reality with strong willpower. The chakra also facilitates extrasensory perception and the manifestation of siddhis (psychic powers) according to one's mental tendencies.

Understanding cause and effect becomes clearer with the awakening of the ajna chakra, leading to a shift in philosophical attitude and approach to life. Life events no longer affect one adversely, and a sense of detachment allows for a more profound understanding of the transient nature of experiences.

Moving from the ajna chakra to the sahasrara (crown chakra) requires discipline, belief, and persistent effort. Once the ajna chakra is activated, the path to the sahasrara becomes clearer, akin to embarking on a journey from one point to another. The focus lies on awakening the ajna chakra, as it serves as the stepping stone to higher spiritual realms and consciousness. Life events no longer affect one adversely, and a sense of detachment allows for a more profound understanding of the transient nature of experiences. Moving from the ajna chakra to the sahasrara (crown chakra) requires

discipline, belief, and persistent effort. Once the ajna chakra is activated, the path to the sahasrara becomes clearer, akin to embarking on a journey from one point to another. The focus lies on awakening the ajna chakra, as it serves as the stepping stone to higher spiritual realms and consciousness.

Life events no longer have the power to disturb one's inner peace or emotional state negatively. The detachment referred to here is not about being disconnected from the world, but rather about maintaining a sense of inner calm and clarity amidst external circumstances. This detachment fosters a deeper insight into the impermanent nature of life's ups and downs, leading to a more accepting and serene outlook.

When the ajna chakra is awakened, it signifies an opening of the mind's eye and an increased awareness of spiritual truths and insights. This activation paves the way for a smoother transition towards the sahasrara, the crown chakra that represents the highest level of spiritual enlightenment and connection to the divine. The journey from one chakra to another is symbolic of the progression towards greater spiritual understanding and realization.

Focusing on activating the ajna chakra is emphasized because it acts as a bridge between the lower and higher chakras, facilitating the flow of energy and consciousness through the spiritual centers. By awakening the ajna chakra, one can access higher realms of consciousness and tap into deeper spiritual wisdom, ultimately leading towards a more enlightened and harmonious way of being.

## SAHASRARA CHAKRA

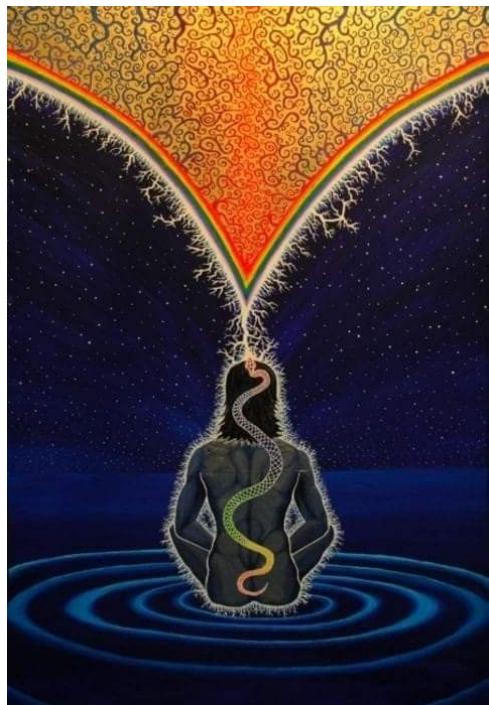

consciousness and prana.

When kundalini shakti reaches sahasrara, it signifies the union between Shiva and Shakti, leading to higher consciousness. This union marks the beginning of self-realization or samadhi, where individual awareness dissolves, resulting in a unified whole where distinctions between experience, experiencer, and experienced disappear. In the state of union, there is absolute silence and the identities of Shiva and Shakti merge into one.

Various mystical and religious systems describe this experience differently, such as nirvana, samadhi, or enlightenment. In Raja yoga, the emphasis is on achieving samadhi, which represents supermental awareness. Samadhi is categorised into stages, with savikalpa samadhi having fluctuations, asampragyata without awareness, and nirvikalpa without fluctuations. The process of attaining samadhi occurs gradually, with the erosion of normal mental awareness and the development of higher awareness.

In Tantra, as kundalini ascends through the chakras, experiences signify the evolving nature of consciousness. From mooladhara to ajna chakra, awareness evolves but remains tied to the ego. Transcendence begins at ajna chakra, leading to the explosion of ego and the initiation of nirvikalpa samadhi. The journey culminates in sahasrara, where enlightenment unfolds as the highest point of awareness.

Comparing sahasrara with nirvikalpa samadhi reveals similar descriptions, indicating that both signify the highest point of awareness. The experiences of samadhi described in Raja yoga align with the descriptions of kundalini awakening in Tantra. Both systems share common practices, differing mainly in their method of expression – intellectual in Raja yoga and emotional in Tantra. Ultimately, kundalini awakening and samadhi represent the same spiritual journey, echoed by various spiritual traditions in different languages, all leading to the ultimate union of consciousness.

# KUNDALINI

Kundalini is a concept originating from Sanskrit, representing a coiled female serpent symbolizing the latent psychic energy located at the base of the spine. The ultimate goal of Kundalini is self-realization, understanding the immortal nature of the soul and expanding consciousness. However, it is important to note that before attempting to awaken Kundalini, the individual must first clear and balance their chakras. Chakras are the purification and distribution centers of life energies within the body, connected by pathways called nadis. There are a total of 72000 nadis, with 114 chakras identified. Among these, there are 7 major chakras, 21 minor chakras, and 86 micro chakras. It is worth noting that one of the seven major chakras is located outside the physical body, above the head. The understanding and alignment of these energy centers are essential in the practice of Kundalini awakening.

The concept of nadis, chakras, and energy centers is an integral part of various spiritual and healing practices, including Kundalini yoga. In the human body, nadis are energy channels through which Prana, or life force energy, flows. There are said to be a total of 72,000 nadis, with each nadi corresponding to a specific function or aspect of our being.

Chakras, on the other hand, are energy centers that are believed to be located at various points along the spine. They are like wheels or vortexes of energy that govern different aspects of our physical, emotional, and spiritual well-being. Among the 114 chakras that have been identified, there are 7 major chakras that are considered the most significant. These major chakras are often associated with specific qualities and attributes, such as grounding, creativity, communication, and intuition.

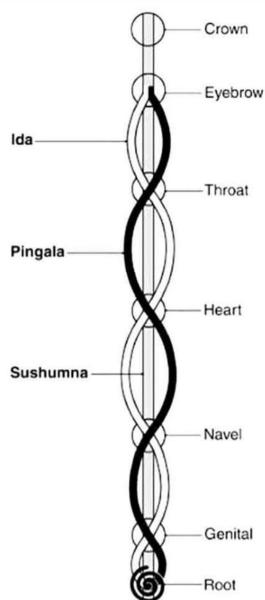

In addition to the major chakras, there are also minor and micro chakras that play a role in our energy system. The 21 minor chakras are smaller energy centers that support the functions of the major chakras, while the 86 micro chakras are even smaller points of energy that are intricately connected to the nadis and the overall flow of Prana.

One of the unique aspects of the chakra system is that one of the seven major chakras is located outside the physical body, above the head. Known as the Sahasrara or crown chakra, this energy center is said to be the gateway to spiritual enlightenment and higher consciousness. Aligning and balancing these chakras is essential for the smooth flow of Prana and the practice of Kundalini awakening, which involves harnessing the dormant energy at the base of the spine and raising it through the chakras to the crown chakra.

Overall, understanding the intricate network of nadis and chakras, as well as the significance of the major, minor, and micro chakras, can provide a deeper insight into our energetic anatomy and support our journey towards spiritual growth and self-realization.

Sufis have borrowed certain concepts and ideas from the Vedas, specifically related to the understanding of consciousness and vital energy. According to the Tantras, the chief centers of consciousness are located in the chakras of the cerebro-spinal system and in the upper brain, known as sahasrara. The heart is seen as Jivatma or the embodied spirit, as well as a vital principle of prana. Sushumna, one of the three nadis, is not a force itself but rather acts as the conduit for the force known as kundalini, which is the cosmic power embodied. This force passes through the innermost chakra nadi, terminating at the 12-petaled lotus below the Sahasrara, from where ascent is made to the Brahmarandra. The chakras are not only physiological entities but also centers of consciousness and activity related to the subtle vital force. Described as vortices of etheric matter from the astral world, the chakras are seen as the conduits for the seven-fold force of the logos, bringing divine life into the physical body.

Sushumna is not a force on its own, but rather the outer of the three nadis that serve as a conduit for the force known as Kundalini. This cosmic power flows through the force, not as a nadi itself, but passing through the innermost chakra nadi that terminates at the 12-petaled lotus below the Sahasrara. Chakras exist not only physiologically but also as centers of consciousness and activity for the subtle vital force known as sushumna prana vayu. These chakras are described as vortices of etheric matter, with the sevenfold force of the logos bringing divine life into the physical body. Each chakra has a dominant force, and communication between the planes is prevented by a web of physical atoms surrounding the astral and ethereal centers. These astral centers each have specific functions, such as the power of feeling at the navel and the power of healing at the throat. Kundalini can be activated through willpower or Yogabal, expanding physical consciousness limitlessly.

However, misuse of these energies can damage the soul, so practitioners of tantric yoga must approach it with a religious attitude and a desire for union with Brahman for liberation. Each chakra has a dominant force that governs its functions and influences our physical, emotional, and mental well-being. The communication between these chakras, which are energy centers in our body, is vital for maintaining harmony and balance. This communication is often hindered by a complex network of physical atoms that create a barrier between the astral and ethereal planes.

Within the astral centers, each chakra serves a specific purpose. For example, the navel chakra is associated with the power of feeling, while the throat chakra is linked to the power of healing. These functions are essential for our overall health and spiritual growth.

One potent energy in the spiritual realm is Kundalini, which resides at the base of the spine. This powerful force can be awakened through the sheer force of will or by practicing Yogabal, a form of yoga known for expanding our consciousness beyond the physical realm. When Kundalini is activated, it has the potential to unlock limitless spiritual potential within us.

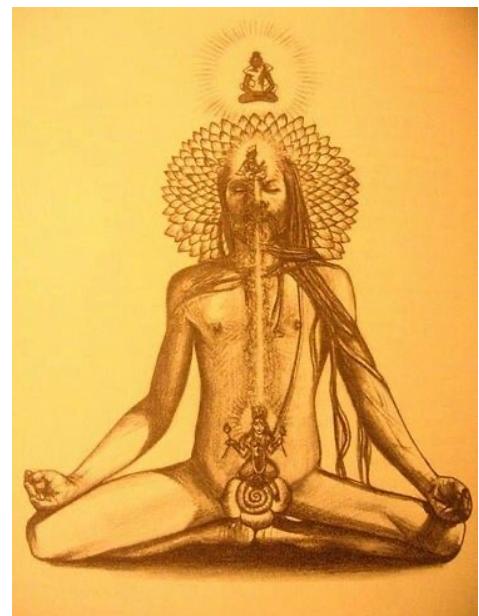

However, it is crucial to approach the awakening of Kundalini and the practice of tantric yoga with caution. Misusing these energies can have severe consequences on our soul and well-being. Therefore, practitioners of tantric yoga are advised to cultivate a religious

attitude and a deep desire for union with Brahman, the ultimate reality, for spiritual liberation and enlightenment. By doing so, practitioners can navigate the intricate energy pathways within themselves and achieve a state of harmony and transcendence.

The relationship between the shaktis of the mental and sexual centers is crucial in understanding the powerful connection between the mind and the body. When the force of the sexual centers is directed upwards, it has the extraordinary ability to heighten mental and physical conditions. Those who are centered know how to converge all their forces upon the object of their will and effectively utilize these energies without neglecting any. The physical body is divided into two layers: the dense Annamaya kosha and the etheric Pranamaya kosha. The chakras, which are the centers of energy of the vital force and universal consciousness, play a significant role in this connection. Kundalini, the static form of creative energy in the body, is the source of all energies, including prana, and is different from prana itself. According to the Vedas, the chakras are considered as differing centers of consciousness, vitality, and tantric energy, with each chakra having a predominant influence over the others. Overall, the chakras serve as vortices of matter in the body, playing a crucial role in maintaining the balance of energies and consciousness within an individual.

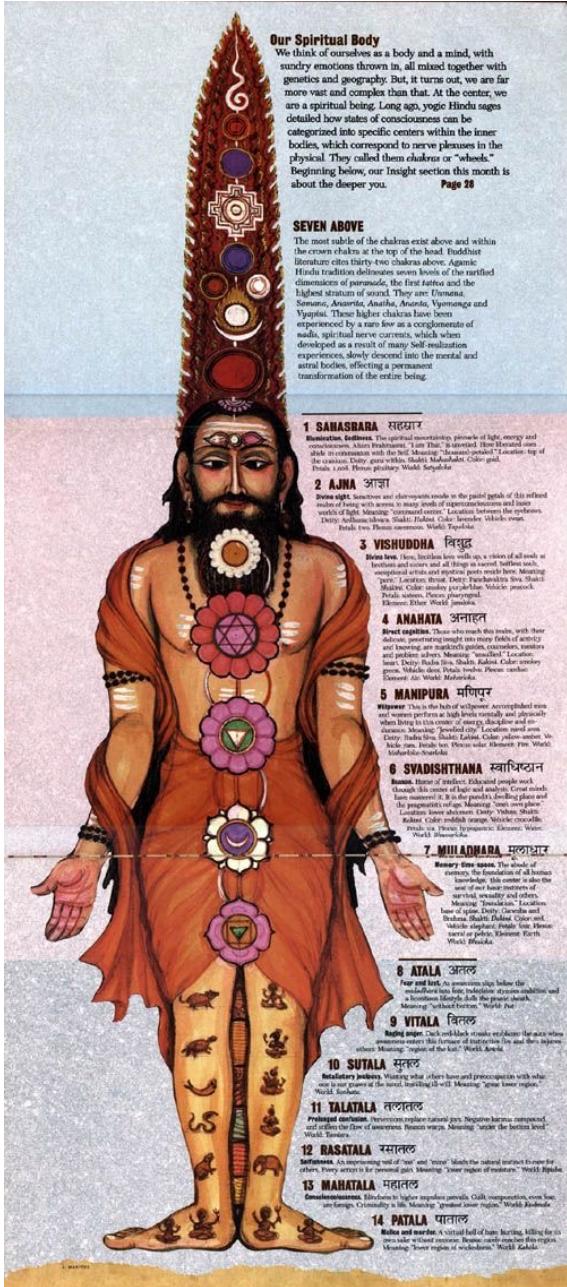

Eshwara, also known as the creative aspect of consciousness, plays a vital role in the practice of yoga. Each of the five lower chakras corresponds to a center of energy associated with a specific tatva. These chakras consist of subtle elements of the physical body, with the total number of petals reflecting the Sanskrit alphabet. The paramount importance attached to consciousness is evident in the functions of Brahma, Vishnu, and Shiva, which represent the one universal consciousness operating within ourselves.

The process of Kundalini awakening involves the transformation of lower states of consciousness into higher ones, facilitated by the proper alignment of the nadis. As Kundalini energy moves upwards through the chakras, a distinct physical and energetic sensation is experienced, with the top of the skull often feeling warm while the rest of the body may feel cold. The kinetic aspect of spirit, or shakti, is viewed as the creative force that manifests in both the macrocosm and microcosm, as described in the Merishwara Tantra.

In this tantric tradition, Shiva and Shakti are seen as inseparable entities representing consciousness and bliss. Shiva is the power holder, while Shakti is the power itself, with both being integral to each other. This philosophical concept underscores the interconnectedness of all aspects of existence, emphasizing the unity of consciousness and creative energy in the universe.

Spices and condiments play a crucial role in not only enhancing the taste of our food but also in aiding proper digestion. It is believed that certain spices have properties similar to the enzymes present in the body, helping to break down the food for digestion. By adding 5 or 6 condiments during cooking, we can liberate enzymes and chemicals that enhance the digestion process. These condiments also help conserve vital energy and maintain the body's internal temperature.

understanding of self and the universe.

Overall, the role of spices, condiments, and dietary choices in the spiritual journey is crucial for maintaining balance in the body, mind, and spirit. By incorporating the right foods and following the recommended practices based on different forms of yoga, individuals can enhance their overall well-being and support their spiritual growth effectively.

Spices play a crucial role in the digestion process by acting as catalysts that help break down food in the body. These condiments possess similar properties to the enzymes naturally found in the body, aiding in the digestion process and conserving vital energy. Adding five or six condiments during cooking can help liberate enzymes and chemicals that enhance digestion.

It is important to note that the recommended condiment intake may differ based on the dietary requirements of individuals practicing different forms of yoga. For example, a Hatha

When it comes to following a specific diet regime based on different yoga practices, it is essential to consider the impact of food on one's body and mind. For example, a Hatha Yoga practitioner may need to avoid consuming excessive amounts of red and black peppers, as it could have adverse effects on their health. Instead, they may opt for easily digestible foods like kichidi, which can include vegetables, lentils, pulses, and the recommended condiments to support digestion.

In the journey of spiritual awakening, there are different steps and practices to follow for individuals practicing various forms of yoga such as Karma Yoga, Bhakti Yoga, Raja Yoga, Hatha Yoga, and Kriya Yoga. Disciplining the ida and pingala, awakening the chakras, and awakening the sushumna are integral aspects of this spiritual path. Additionally, the descent of Kundalini energy through Vama Marga and Pakshina Marga plays a significant role in activating dormant energy centers within the body.

In the process of awakening the chakras, it is important to understand that even if all the chakras and sahasrara have been opened, it does not guarantee an automatic opening of Kundalini energy. Each chakra is associated with specific characteristics including color, lotus petals, yantra, bija mantra, animal symbol, and divine symbol. These elements represent the connection between the physical and spiritual aspects of the individual, leading to a deeper

Yogi may need to avoid consuming large quantities of red and black peppers to avoid adverse effects on health.

Additionally, dishes such as kichidi, which are easy to digest, can be enhanced by adding vegetables, lentils, pulses, and condiments together. The process of awakening in yoga involves disciplining the ida and pingala, awakening the chakras, and ultimately awakening sushumna, which is believed to facilitate the descent of Kundalini energy. Vama marga, also known as the left-hand path, integrates sexual practices with yoga techniques to explore dormant energy centers.

It is important to understand that the awakening of chakras and Kundalini are distinct processes, and even if an individual has opened all their chakras, it does not guarantee automatic Kundalini activation. Each chakra is associated with unique characteristics, including color, petals of a lotus flower, yantra or geometrical shape, bija mantra, animal symbol, and divine symbol, each representing different aspects of spiritual awakening and energy flow.

# TANTRIC SEX

Spiritual sex is a concept that goes beyond the physical act of making love. It involves connecting with your partner on a deeper level, both emotionally and spiritually. In spiritual sex, the focus is not just on the pleasure derived from the physical sensations but on the connection between two individuals at a soul level. This practice may involve meditation, visualization, and the use of energy to enhance the intimate experience.

One of the key aspects of spiritual sex is mindfulness. It involves being fully present in the moment, letting go of distractions and worries, and focusing entirely on the connection with your partner. This heightened awareness can lead to a more intense and fulfilling experience, as both individuals are fully engaged and connected on a spiritual level.

Another important element of spiritual sex is the concept of energy exchange. This involves the idea that our bodies are made up of energy, and during sexual intimacy, there is an exchange of this energy between partners. By being attuned to this energy exchange, individuals can deepen their connection and enhance the intimacy of their relationship.

Spiritual sex also emphasizes the importance of honoring and respecting your partner. It involves open communication, trust, and a willingness to be vulnerable with one another. By creating a safe and loving space for intimacy, partners can feel more connected and nurtured, leading to a more profound experience.

Overall, the true meaning of spiritual sex lies in the connection between two individuals on a spiritual level. It involves mindfulness, energy exchange, and a deep sense of respect and love for one another. By cultivating these aspects in their intimate relationships, individuals can experience a more profound and fulfilling connection with their partners. Auto Write the next sentences in detail by providing additional details and elaborating on its meaning:

Creating a safe and loving space for intimacy is crucial for partners to feel truly connected and nurtured in their relationship. This safe space allows both individuals to let their guards down, be vulnerable, and truly be themselves without fear of judgment or rejection. It involves establishing trust, open communication, and mutual respect, which are essential for fostering a deep emotional and physical connection.

In this context, spiritual sex goes beyond just physical pleasure and gratification. It delves into the spiritual connection between two individuals, where they are able to connect on a deeper level beyond the physical realm. This type of intimacy involves being fully present in the moment, practicing mindfulness, and engaging in an energy exchange that transcends the physical act of sex.

Furthermore, spiritual sex emphasizes the importance of respecting and honoring each other's boundaries, desires, and needs. It involves approaching intimacy with a sense of reverence, understanding, and love for one another. By nurturing these qualities in their intimate relationships, individuals can cultivate a more meaningful and fulfilling connection with their partners that goes beyond the surface level. This kind of connection promotes emotional intimacy, mutual understanding, and a deep sense of fulfillment in the relationship.

The ancient Indian texts known as Tantra provide insights into sexual intimacy between two individuals in a way that goes beyond just physical pleasure. Tantra views sex as a sacred act that can help individuals connect on a deeper level, both spiritually and emotionally. One of the main principles of Tantra sex is the idea of achieving a state of oneness with your partner, where boundaries between individuals dissolve and a sense of unity is experienced.

Tantra sex emphasizes the importance of mindfulness and being fully present during sexual activity. This means focusing on the sensations, emotions, and energies that arise during the intimate moments shared with a partner. By being fully present, individuals can deepen their connection with each other and experience a greater sense of intimacy.

Another key aspect of Tantra sex is the concept of energy exchange between partners. Tantra teaches that sexual energy is a powerful force that can be harnessed to strengthen the bond between individuals and enhance their overall well-being. By cultivating and channeling this sexual energy, partners can create a harmonious and fulfilling sexual experience that goes beyond mere physical pleasure.

Tantra sex also encourages individuals to let go of societal taboos and limitations surrounding sex and embrace their true desires and fantasies in a safe and respectful manner. By exploring and expressing their deepest desires with a partner, individuals can experience a sense of liberation and authenticity in their sexual relationships.

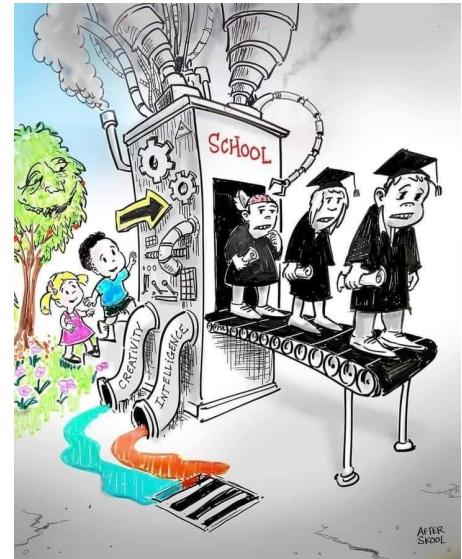

Overall, Tantra sex offers a holistic approach to sexual intimacy that emphasizes spiritual connection, emotional closeness, and mutual respect between partners. By incorporating the principles of Tantra into their sexual relationships, individuals can deepen their connection with each other, experience greater pleasure and fulfillment, and cultivate a sense of oneness that transcends the physical realm.

# EDUCATION

Education system around the world are mostly the same ideology with different implementation. Some are more optional and free than others depending on their society and culture. Most have been in that system with less than 9 percent as exception. All of us are programmed to think a certain way and do certain things in programmed order.

Each person has a unique soul which they programmed us to believe that we do not and conditioned us to lose the touch with our soul with their cleverly crafted education system which only teaches one thing to OBEY. Now as a byproduct of that system we simply do things cause everyone else does it, we are scared to stand out and be in union with the self.

A person who just blindly believes everything without the reason in religion, society, spirituality, science are just enslaved. When the kings, queens, preachers, messengers all have influenced your thoughts to make you believe that you are inferior than them, but is it so? I do not think so.

Each and everyone has the same energies inside this physical body, the main thing you need to realise is that it's not the influencers who made you a slave you are enslaved by your own thoughts as you need know what our mind believes it makes it a reality. So all those suppressors did was influence you to think you are inferior and you slowly started believing it, same thing with education they are conditioning you from the start to mood your mind into an inferior low vibrational state.

This is what they are doing to a child in the name of education, the child gets separated from the parents from the age of 6 and spend at-least 8 hours of their time in these schools which have lot of time to turn these kids into slaves.

Look at these similarities between a school and a prison :

- Both have authoritarian style
- Both have a dress code
- Emphasis on silence and order
- Negative reinforcement
- Both systems has a rule to walk in lines
- Set times to eat, walk, use a bathroom
- Both students and prisoners do not get a say in decisions and cannot question authority
- Abridged Freedom
- lots of individual autonomy

Education is not a modern concept we had a very unique way of teaching in ancient times which was different from our current system. In ancient time the sacred bond between a guru and student is very special and is valued by both, as we know this is not the case in today's society.

One of the highly overlooked ancient education is the concept of Gurukula. This Gurukula system was introduced during the Vedic period in Indian civilisation.

Gurukula faced drastic shift in phases in its original system during the Vedic period. In the original system of Gurukula education at the start of Vedic period, where Gurukula were open to everyone. The early Vedic society was quite liberal and egalitarian. Sages imparted knowledge of vedas, they teached them the mastery of mind, energies, physical body and the physical world and send into the world to explore the whole universe. These Education of vedas was seen as everyone's right unlike today's society where the truth is hidden by the elites for the control of the whole race of humans. Early Vedic society viewed the education as a means to attain moksha. Every person devoted themselves to realise self and attain divinity. It was a society of enlightened people.

Then the Vedic society which was focused on people's enlightenment changed and the society has divided its people into different castes and hierarchies where Brahmins stood at the top of the system and the untouchables as the lowest. In this society only the 3 classes of people

that is The Brahmins, The Kshatriyas and the vaishya students were allowed to study and they started restricting knowledge to all other classes of people.

**Gurukula:** In this system of education, the students used to stay with the guru at an place called ashram where the whole ashrams revolved around the guru as their master who was adept in the knowledge of the martial arts, yoga and social sciences as well as the spiritual knowledge that acquainted one with the subtle truths of all existences. But mainly the guru has deep knowledge of the vedas and Upanishads and passed on his knowledge to his students.

Gurukula had three main things:

- Acharya or teacher or the guru
- Shishya or the student or the adept
- Ashram or the residential learning area usually located in an remote forest.

There are two kinds of knowledge to become a divine being; those who are beginning to activate their consciousness or their union with bhraman

- 1) pārā — The highest level of consciousness - universal consciousness
- 2) Aparā — The lowest level of consciousness - individual consciousness

Parā means that by which the absolute is know and it is the cosmic/ universal consciousness.

Aparā means having nothing beyond this physical world . It is the manifested form of the pārā .

Both of these knowledge must be learned by the adept, Aparā or the lower knowledge which is physical world knowledge of everything that is around you and parā or the higher knowledge is the spiritual knowledge of the divine multiverse. With aparā you can see through the matrix just as neo in the matrix movies, you can see that everything is connected to the source and you could easily change the codes of the physical world and as a result you can create any reality of your soul's desire.

In the Gurukula system the knowledge of the material world was written in the vedas and the śastras . There are 4 Vedic books are theywere further divided into 4 parts , the first three are written on the Aparā knowledge.

#### 1. SAMHITA

This contains hymns or mantras for manifestations.

These mantras are in the form of — verses (rik)

— prose (yajus)

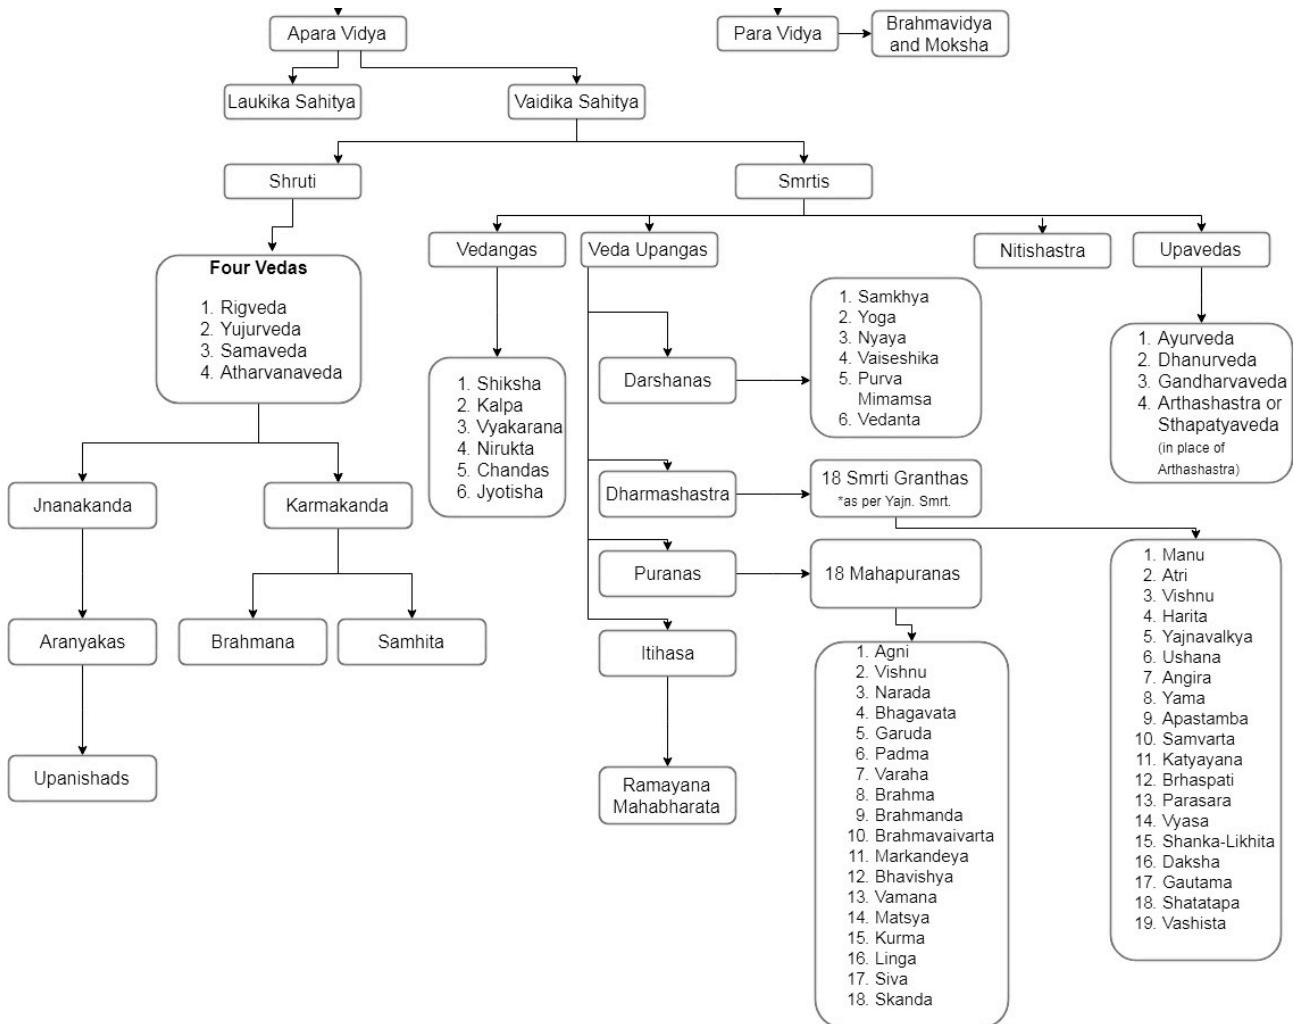

— chants (saman)

#### 2. BRAHMANAS

This teaches the adept the practical use of the verses and the chants written in the Samhita.

#### 3. ARANYAKAS

This contains the esoteric knowledge of the practical rituals, the main subject of the brahma.

This account for the Aparā knowledge along with six other parts of vedas that are

- Diksha ( pronunciation and alphabets)
- Kalpa (Rituals)
- Vyakarna ( Grammar)
- Nirukta (etymology)
- Chanda (Vedic metrics)
- Jyotisha (astrology)

Parā knowledge which was largely written in the fourth philosophical section of Vedas called the Upanishads could alone lead the adept to immortality .

From the period of Rigveda onwards our ancient education system evolved over time and it focused on the holistic, linguistic and psychic development of the individual by focusing on both the inner and the outer self. The system focused on the enlightenment of the self and their connection to the all five elements. So, this is what a child should be taught to that's is to live a life of liberation.

# ASTROLOGY

Vedic astrology, also known as Jyotish Shastra, is a system of predicting events based on the positions of the stars and planets. In this practice, the celestial bodies are not referred to as planets, instead, they are called grahas, which in Sanskrit means "which grabs or holds." Each graha is said to gather and transmit specific wavelengths of energy necessary for maintaining the order of the solar system.

The Navagrahas, or the nine main grahas, include the Sun (Surya), Moon (Chandra), Mars (Mangala), Mercury (Budha), Jupiter (Brihaspati), Venus (Shukra), Saturn (Shani), Rahu (North Node), and Ketu (South Node). Rahu and Ketu are subtle grahas known as shadow planets and are generally considered negative influences.

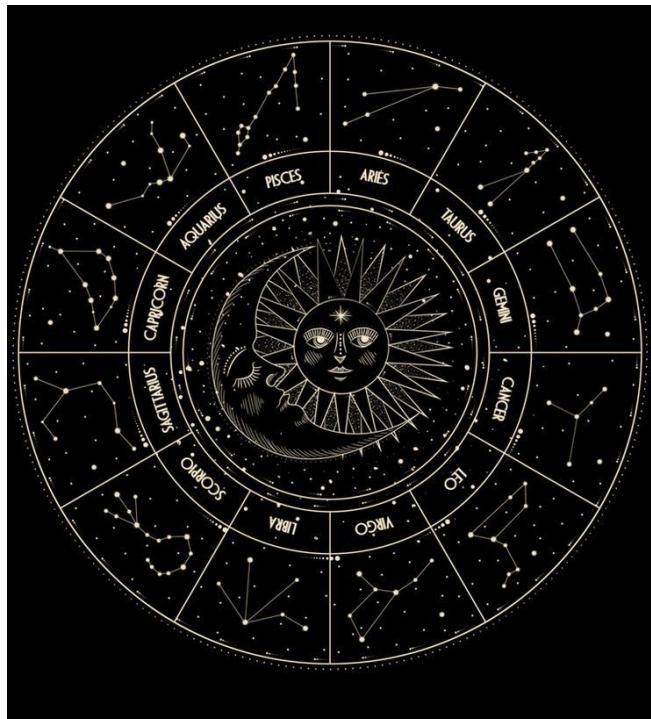

According to Vedic astrology, each graha represents a particular aspect of life and is under the jurisdiction of a specific deity. These deities play a significant role in delivering lessons and facilitating spiritual growth through the concept of karma.

The belief in astrology and reincarnation developed side by side, with believers in one often being proponents of the other. The philosophy of life includes the themes of astrology and rebirth, with ancient texts attributing astrological significance to past and future states of existence.

In Tibetan astrology, astrologer-priests use secret formulas to determine previous existences based on the positions of stars at the beginning of a person's life. They seek to understand the spiritual entity's place among the causes and consequences that shape the soul's journey through different planes of consciousness.

The Bava Chakra, or wheel of transmigratory existence, is a fundamental concept recorded in the ceilings of some monasteries in Sikkim. It divides the soul's journey into 12 zodiacal signs, each representing an impulse or cause of rebirth. Understanding this cycle helps philosophers comprehend the present condition as a result of past actions and lifetimes.

Overall, Vedic astrology offers insights into the interconnectedness of celestial bodies, karma, and spiritual growth, providing a framework for understanding life's journey through the lens of cosmic influences and cosmic forces.

In the Tibetan monastery figure, there is a detailed representation of the various stages of existence and spiritual development. The central part of the design symbolizes the world and the conditions that shape it, divided into six parts. These panels depict the different levels and degrees of spiritual development that souls may experience.

The upper hemisphere of the circle represents the three noble states of being - the world of gods, the world of Titans and heroes, and the world of men. These realms signify the higher states of consciousness that are the result of good karma and noble actions.

On the other hand, the lower hemisphere of the circle illustrates the suffering that comes from bad karma, negative thoughts, emotions, and actions, including the world of animals, ghosts, and hells. These realms represent the consequences of destructive behaviors.

In each of the six parts, the presence of the Buddha symbolizes universal enlightenment, which guides and preserves the evolution of souls in all spheres of existence. The Buddha represents the universal enlightenment that illuminates all aspects of being and creation.

The sun in the figure symbolizes Buddha and the power of illumination. It is the source of light and life, providing the impulse towards growth and enlightenment. The six compartments through which the sun's light shines correspond to the major bodies of the solar system recognized by ancient astrologers.

Ultimately, the cycle of existence, as depicted in the Tibetan monastery figure, highlights the continuous journey of the soul through various stages of life, growth, and spiritual development. Each stage offers unique lessons and opportunities for growth until the soul reaches enlightenment and detachment from the material world.

## ZODIAC SIGN

Each zodiac sign carries with it the karmic energies of the previous existence, as indicated by the ruling planet of the sign preceding it. Understanding the positions of the ruling planet and other celestial bodies in the 12th house of each sign can provide insights into the circumstances of past lives and the general theme of that existence.

For example, individuals with Aries dominating their previous life may exhibit strong ambition and enthusiasm in their present life, moving forward with a sense of release. Aries ascendants in the current life suggest a dominance of Sagittarian qualities. Taurus rising indicates the impulse and militancy of previous Arian existence, blending with the artistic surface of Taurus.

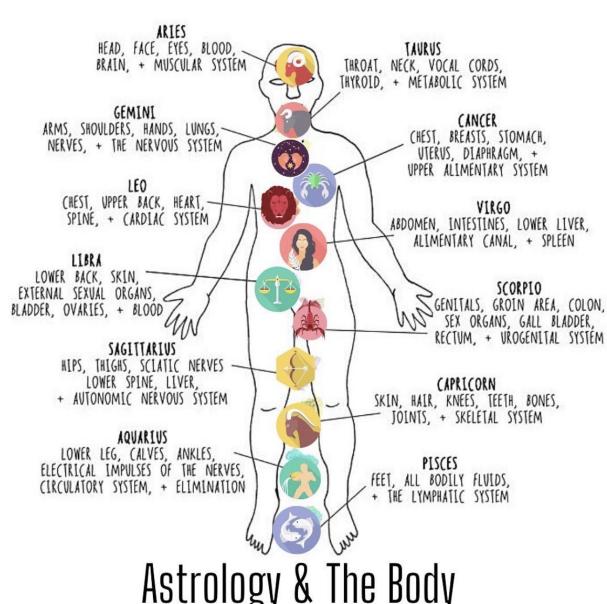

Gemini ascendants may carry karmic pressures from Taurus, reflecting in their intellectual disposition and superficial temperament. Cancer ascendants find themselves confronting negative influences from Gemini, leading to distorted imaginations and complex fears. Leo's influence can bring strength from past weaknesses, resulting in a powerful drive tempered by a simple nature.

Libra ascendants often struggle with internal insufficiency from Virgo, manifesting in a delicate yet vain temperament. Scorpio enhances the ambitions of Libra, offering depth and organization to emotions. Sagittarius rising individuals may experience limitations from past actions curtailed by the present, leading to a need to reevaluate and prepare for new beginnings under the influence of Capricorn.

Aquarians and Pisceans may feel inhibited or restricted due to past experiences, with a keen sense of justice and a desire for order and renewal. Understanding the karmic energies associated with each zodiac sign can provide valuable insights into character traits, behaviors, and challenges faced in this present life, guiding individuals towards growth and self-awareness.

Deep inside themselves, many Virgo people have a definite sense of superiority and completeness. When this sign is ascending, there is a subconscious repentance in the soul, as if the previous life was under the forceful, dominating influence of others. The inherent information reveals the emptiness and vanity of authority, and the native Virgo is born into this world with a strong tendency towards simplicity and a strong inclination to help others, despite the impulse to boss individuals around.

For a Pisces, it is important to put their life in order and prepare themselves for a new beginning. When this sign is ascending, there is a general revolt against precedent, convention, and conservatism. Generous in large matters, Pisces often retain a selfishness in small things, essentially Capricornian. It is the last sign and brings an end to the cycle of Karma in Aries. People with this sign rising will typically have hectic lives, gathering up the loose ends of unfinished business.

From Aquarius comes the realization of consistency and nervousness. From all the previous signs comes responsibility and problems to be managed and transformed into something solid. It is considered the weakest of the signs in terms of power, as it represents the end of cycles.

All that we are today is the result of what we have become and been. What we will be tomorrow must be the result of what we are today. We learn from the past, we labor in the present, and we build for the future. If the same sign is on the 12th cusp of both charts and 14 hours, it is believed to indicate a "continued existence." This means that if a previous life was interrupted in some way before its purposes were fulfilled, the native in the present embodiment will experience changes and events that would have normally occurred in the next embodiment.

## FLAT EARTH

The solar system is often perceived as a spherical shape, but in reality, it is more of a flat disk that whirls in a plane. The planets deviate slightly from this plane. This concept has been a long-standing issue in astronomy, with theories about the formation and structure of the solar system evolving over time. One prevailing idea is that at one point in time, an enormous mass was ejected into space, retaining its general shape but also gaining its own revolutionary movement in the same plane.

Neptune, the most distant planet in our solar system, is believed to be the first solidified body from this mass. The discovery of Neptune was a significant achievement in astronomy, as perturbations in its orbit led scientists to speculate about the existence of another celestial body. This eventually led to the discovery of Pluto in 1864.

The spacing between planets in the solar system is predicted by Bode's Law, which provides a formulaic prediction of the distances between planets in astronomical units. This law helped in predicting the distances of planets like Mercury, Venus, Earth, Mars, and Jupiter but faltered when it came to Neptune.

The formation of planets like Uranus, Saturn, and the Asteroids followed a similar pattern, leading to the belief that they are fragments of exploded planets. The formation of moons around planets was also an interesting phenomenon, with some moons behaving like small planets themselves.

The fixed stars in the sky are immensely distant compared to planets, and they form constellations that have been observed and studied for millennia by ancient astrologers. The influence of stars combines naturally with that of planets, and their positions in the sky have been symbolically associated with animals in constellations like Aries, Taurus, and Leo.

The discovery of asteroids led to the realization that they were fragments of exploded planets, with Nephine being the exception to this rule. The same process repeated to form Uranus, Saturn, Janites, Asteroids, and molean countless Mars, pallions of which Earth, Menus, and Mercury.

Many other bodies were formed in a similar manner but lacked the principle of joudly, breaking into asteroids and meteors after separating from the Sun. Some bodies behaved like the Sun and threw off small bodies, such as the moon. Fixed stars are immensely farther than the planets, with constellations grouped at equal distances and named after symbolic animals. The influence of stars, along with planets, has been studied by ancient astrologers, mainly based on the resemblance of animals in their relative positions.

The materialistic school of philosophy has sought to provide an understanding of the forces at work in the world around us. However, it must be acknowledged that all forces ultimately remain mysterious. Even a seemingly simple phenomenon like the expansion of bodies through heat presents a level of mystery. The concept of heat as a manifestation of motion further adds to the complexity, with imaginary molecules and atoms being theorized as the building blocks of matter.

Over time, new hypotheses and observations have challenged traditional views on matter and its composition. Modern physicists and chemists find themselves drawing parallels

between their definitions of matter and those of medieval philosophers defining spirits within humans. This shift in perspective underscores the continuous evolution of scientific understanding.

In contrast, astrology takes a more candid approach, acknowledging the inherent mystery in all things. The idea that everything leads to mystery encourages a deeper exploration of concepts rather than settling for superficial explanations. The recognition of relativity and the interconnectedness of forces emphasize the importance of observing and measuring the world around us.

Astrology, while not directly related to scientific theories, aligns with the scientific method of understanding patterns and correlations. Similar to observing events unfold at a shooting range, astrology looks for repeated patterns and connections to determine causal relationships. Despite this approach, there remains a level of incomprehensibility in some phenomena, highlighting the limitations of human understanding.

# ALCHEMY

Alchemy, often associated with the transmutation of base metals into gold, was more than just a physical art or science. It encompassed a philosophy and experimental science aimed at proving certain philosophical views of the cosmos. While some alchemists pursued the creation of gold for wealth, others believed in a transcendental theory that viewed Alchemy as a means to perfect the soul spiritually. They saw the transmutation of base metals into gold as symbolizing the salvation of man, achieved through the elimination of evil and the development of good by God's grace, leading to spiritual rebirth and union with the Divine.

Critics of the transcendental theory, like Arthur Edward Waite, argued that alchemists were indeed engaged in physical operations on the material plane. The writings of alchemists contained accurate accounts of chemical processes and discoveries that laid the foundation for modern chemistry. While mysticism played a role in alchemistic doctrines, it was deemed insignificant by those who viewed Alchemy from a scientific standpoint. However, acknowledging the mystical element in Alchemy is crucial for understanding its true nature.

Alchemists considered their art to be a divine gift, emphasizing the importance of a devout and God-fearing attitude as the first step towards achieving the magnum opus. They believed that the highest secrets of Alchemy could not be learned from books but required a pure heart and sincere prayer for God's grace. The mystical language used by alchemists further added to the enigmatic nature of their work, with many texts being incomprehensible in a purely physical sense. Despite the complexities of alchemistic language, it was believed to hold profound spiritual truths that transcended material pursuits.

Alchemy was a multifaceted discipline that combined philosophy, experimental science, and mysticism. While the pursuit of material wealth through transmutation was a prevalent motive for some alchemists, others viewed Alchemy as a spiritual journey towards enlightenment and union with the Divine. The interplay between physical experiments, mystical beliefs, and divine grace defined the essence of Alchemy, shaping its legacy as a profound and intricate system of thought and practice.
